

SYSTEMS LEADERSHIP DEVELOPMENT ASSOCIATION

SL
DA

The Systems Leadership Development Association was formed in 2014 for people interested in Systems Leadership to support each other in its application and to encourage its growth and development.

Our purpose is to encourage the understanding of the sustainable application of Systems Leadership in diverse work environments.

We are open to people engaged in Systems Leadership at all levels, in order to develop sustainable use through future generations.

Systems Leadership is an integrated set of organisational concepts, models and tools concerned with how people come together to achieve a productive purpose. They provide a framework for developing, analysing and working with propositions about organisations, management and behaviour. They have been developed in application across several decades and across many industries, countries and languages.

1 Network

The association's members come from various countries to connect with each other to learn about and support the application of Systems Leadership. Members include Systems Leadership practitioners from a range of industries, sectors and cultural settings. Networking is facilitated through the annual conference, newsletters and regular development opportunities.

2 Development Opportunities

The association hosts regular opportunities for members to develop their knowledge of Systems Leadership. Master Classes are held around Australia multiple times throughout the year on a range of relevant topics (for example: Levels of Work, Application of Systems Leadership Modelling to Managing Safety). Online workshops and forums provide development activities for members across the globe. Events and meetings in geographical hubs provide members with opportunities to network with other practitioners with similar interests.

3 Resource Library

Members are provided access to a library with extensive resources on the application and understanding of the concepts, models and tools of Systems Leadership. Materials include Case Studies, Position Papers, PowerPoint Presentation, Videos etc. The resource library is password protected for the use of members.

4 Annual Conference

The Systems Leadership Development Association hosts an annual conference dedicated to supporting the effective development and application of Systems Leadership. This event brings association members together to explore a specific theme through keynote speakers, presenters, papers, forums and panel discussions. Members of the association have the opportunity to submit papers and deliver presentations.

We are rebuilding activity this year and will recommence membership fees from late 2022 (previously set at AUD \$50 pa). For more information on Systems Leadership please also refer to: www.macconsultancy.com
